

# Introduction

Advanced concepts

# An Overview

- Minimising repetitive patterns with subDAGs
  - Repeating patterns.
- How to interact with external sources using hooks
  - Interact with MySQL, PostgreSQL like you were logged in.
- How to share data between your tasks with XComs
  - A way to exchange messages between tasks.
- How to execute tasks according to criteria using branching
  - How to use one branch or another according to a condition.
- Control your tasks with SLAs
  - Defining a SLA in your DAG for checking the execution time of your tasks.
